Montenegro-Albania and Montenegro-Kosovo 2014-2020 and 2021-2027

August 2026

SKADAR/SHKODRA LAKE AS SEEN BY THE COPERNICUS SATELLITE

CONTENT

The twenty-sixth issue of the newsletter brings you information on activities and events implemented within both IPA Cross-border Cooperation (CBC) Programmes Montenegro - Albania and Montenegro - Kosovo* 2014-2020 and 2021-2027. Programmes and project activities are funded by the European Union.

Please find below more information on the programmes.

IPA III CBC Programme Montenegro - Albania

2021- 2027

The global objective of the programme is to promote good neighbourly relations, foster Union integration and contribute to social, economic and territorial development by improving the quality of life of the population in the programme cross-border area by tourism development based on cultural/natural heritage and by protecting the environment.

- Joint Monitoring Committee and Bilateral Meeting held in Bar9

This publication was produced with the financial support of the European Union. Its contents are the sole responsibility of the Joint Technical Secretariat of the CBCP MNE-ALB and MNE-KOS and do not necessarily reflect the views of the European Union.

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo Declaration of Independence.

Skadar/Shkodra Lake in UNESCO's World Network of Biosphere Reserves: A result of successful cross-border cooperation between Montenegro and Albania

One of the most recognisable symbols of the natural connection between Montenegro and Albania has received significant international recognition. The Skadar/Shkodra Lake Watershed, which the two countries share not only geographically but also through their common responsibility for its conservation, has been included in UNESCO's World Network of Biosphere Reserves under the Man and the Biosphere (MAB) Programme. Behind this recognition are years of professional work and cooperation among institutions, civil society organisations and local communities on both sides of the border.

An important part of this process was implemented through the project *Skadar/Shkodra Lake Watershed - A Transboundary Biosphere Reserve*, funded through the IPA Cross-Border Cooperation Programme Montenegro - Albania.

Photo credit: Eniko Mosi

The project was implemented from February 2023 to July 2025, with a total value of EUR 453,096, of which the European Union provided EUR 385,131 in grant support. The lead partner was EDEN Center from Albania, while EnvPro from Montenegro, the National Agency of Protected Areas of Albania and the Public Enterprise for National Parks of Montenegro also participated in its implementation.

Photo credit: Densko Miljanic

The partners shared a clear ambition: to create the professional and institutional prerequisites for the nomination of this unique ecosystem as a UNESCO biosphere reserve, while at the same time improving biodiversity protection, ecological monitoring and cooperation between the two countries in managing an area that naturally knows no administrative borders. During project implementation, the technical documentation required for the nomination was prepared, public opinion surveys were conducted and consultations were organised with institutions, experts, civil society organisations and local communities. Thematic working groups were established in both countries, national and cross-border workshops were held, while monitoring, education and public communication plans were developed. More than 200 representatives of institutions and other stakeholders participated in the process, during which two national nomination dossiers were submitted to UNESCO and one joint cross-border dossier was prepared.

Recognition, but also a new responsibility

For the institutions directly managing this area, UNESCO status represents much more than international recognition. **Marinela Đuretić**, Director of the Public Enterprise for National Parks of Montenegro, points out that the inclusion of the Skadar/Shkodra Lake Watershed in UNESCO's World Network of Biosphere Reserves confirms its exceptional natural, ecological and cultural value, as well as the shared responsibility of Montenegro and Albania for its conservation.

"The inclusion of the Skadar/Shkodra Lake Watershed in UNESCO's World Network of Biosphere Reserves represents international confirmation of the exceptional natural, ecological and cultural value of this area, as well as recognition of the efforts of Montenegro and Albania to approach the protection and sustainable development of this unique ecosystem as a shared responsibility," says Đuretić.

Marinela Djuretic - Photo credit: MNE Ministarstva

She emphasises that an integrated approach is particularly important for the management of Skadar/Shkodra Lake National Park, establishing a balance between nature conservation, scientific research, sustainable use of the area and the needs of the local population. Problems such as pollution originating from rivers, agriculture and urban areas do not stop at national borders and therefore require coordinated action by Montenegro and Albania.

The broader importance of the area is also reflected in its exceptional diversity. **Ana Katnić** from EnvPro notes that the watershed stretches from the source of the Morača River, through mountainous and canyon landscapes and Skadar/Shkodra Lake, all the way to the Bojana/Buna River delta, sandy beaches and the coastal area of Ulcinj. The area brings together karst hydrological systems, wetlands, mountain landscapes and the coastal

zone, while Skadar/Shkodra Lake is the largest lake in the Balkans and provides habitat for more than 280 bird species, including one of Europe's last breeding colonies of Dalmatian pelicans. *"What makes this area particularly worthy of UNESCO status is the coexistence of people and nature in the Skadar/Shkodra Lake region, precisely what the MAB Programme recognises as a 'learning place for sustainable development',"* **Katnić** points out.

For EDEN Center, as the lead partner, UNESCO recognition confirms that years of joint work and investment in nature conservation have produced a concrete and lasting result. **Ersya Prifti** from EDEN Center emphasises that this achievement is particularly important because of the trust

shown by local communities from the very beginning of the project. *"The citizens of Shkodra and Malesi e Madhe believed in this initiative from the outset, actively participated in the process and recognised the project as an opportunity to contribute to the protection and promotion of the natural values of this area,"* says **Prifti**. According to her, UNESCO recognition confirms that trust, cooperation and joint efforts can lead to concrete results with lasting impact, while at the same time providing an important impetus for continued efforts in nature conservation and sustainable development.

From a shared idea to UNESCO nomination

The path from the initial project idea to international recognition involved continuous dialogue among partners, institutions and local communities. **Prifti** explains that from the very beginning, the project was conceived as a joint initiative belonging to all stakeholders involved, creating a sense of shared responsibility and ownership of the process. The active involvement of local stakeholders proved particularly important in ensuring that the nomination process was based on the needs, perspectives and contributions of the communities living in the area.

"Cross-border cooperation between partners, institutions and communities from Albania and Montenegro was crucial. Through dialogue, exchange of experience and close cooperation, national and local institutions and local stakeholders from both countries shaped a common vision for the

Skadar/Shkodra Lake Watershed. It was precisely this vision that provided the foundation on which we further developed the nomination dossiers," **Prifti** emphasises.

At the same time, the project provided the comprehensive technical basis required for the nomination. Analyses were prepared against the criteria of UNESCO's Man and the Biosphere Programme, along with ecological and socio-economic analyses, assessments of opportunities for education and monitoring, as well as a zoning concept covering core, buffer and transition zones. According to **Ana Katnić**, the project also developed the basis for a future management plan and communication strategy, while the survey of the local population covered 11 municipalities. National and cross-border workshops and exchanges of experience with European biosphere reserves were organised, while national and cross-border nomination dossiers were prepared with expert support.

Results that remain after the project

An important part of the project was aimed at ensuring that the nomination process did not end with the preparation of documentation. In parallel, the professional and technical capacities of the institutions responsible for protecting the area were strengthened, monitoring methods were improved and conditions were created for better data exchange between the two countries.

The National Parks of Montenegro assess that the cross-border character of the project enabled significant progress. Montenegro and Albania had previously used different data collection methodologies in certain areas, while joint work enabled better information exchange and created a stronger basis for assessing the state of the ecosystem as a whole. Through training, workshops and expert support, capacities were improved for monitoring species and habitats, ecological mapping and tracking changes and pressures on the ecosystem. The results are also tangible on the ground. A dedicated boat was procured for Skadar/Shkodra Lake National Park for monitoring the lake area, supporting the work of protection services and carrying out monitoring and scientific research activities. Camera traps, drone, camera and other field equipment were also provided. Beyond the equipment itself, improved methods for monitoring biodiversity, invasive species, habitat degradation and other pressures on the ecosystem remain as lasting project results.

UNESCO status as an opportunity for local communities

The concept of UNESCO's Man and the Biosphere Programme is based precisely on connecting nature conservation with sustainable development. A biosphere reserve does not imply isolating an area from its population, but rather finding a model in which preserved nature becomes a resource for a better quality of life and the long-term development of local communities.

Ersa Prifti emphasises that UNESCO recognition opens new opportunities for the sustainable development of communities around Skadar/Shkodra Lake by strengthening the link between nature conservation and local economic development. According to her, the status can contribute to the development of new forms of sustainable tourism and ecotourism, the promotion of local products and traditions and the creation of additional opportunities for local businesses and residents. At the same time, it brings greater shared responsibility to preserve the natural and cultural values of the area in a way that allows economic development to progress alongside nature conservation. The results of research conducted through the project show that such an approach also enjoys support among the local population. According to EnvPro data, 70 per cent of surveyed residents want their area to be part of the biosphere reserve, while clean air, nature and food are recognised as the area's greatest tourism assets, including ecotourism as the sector with the greatest employment potential.

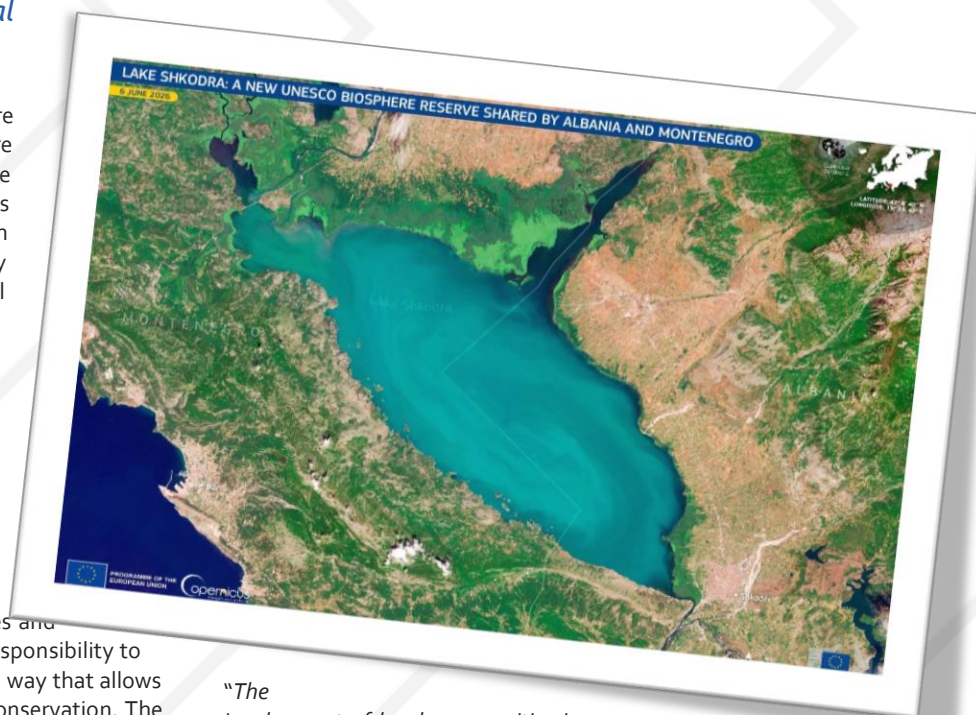

"The focus is on developing ecotourism, sustainable agriculture and local products, while continuously involving the community in decision-making, because long-term nature conservation is best achieved when local people also see their own economic benefit in it," says **Katnić**.

The National Parks of Montenegro recognise similar potential. Greater international recognition of Skadar/Shkodra Lake could encourage the development of birdwatching, kayaking, active tourism, cultural heritage and local gastronomy, while opening new opportunities for local guides, tourism households, food producers and producers of traditional products. Development, however, must be carefully planned to ensure that additional activities do not place pressure on the most sensitive parts of the lake.

Acting Director of NAPA, points out that local people will have an important role in the future management and sustainable development of the biosphere reserve.

The Albanian National Agency of Protected Areas (NAPA) also emphasises that, in addition to providing international recognition of the area's exceptional natural and ecological values, UNESCO recognition should bring concrete benefits to communities living around the lake. **Juxhina Spahiu**,

"The involvement of local communities is essential to ensure that nature conservation objectives are accompanied by concrete opportunities for the economic and social development of the area. UNESCO status creates opportunities for the development of sustainable tourism, the promotion of local products and traditions, as well as the development of nature-based economic activities," **Spahiu** emphasises.

For NAPA, UNESCO status also provides a basis for a stronger integrated approach to managing the area. This includes improving biodiversity monitoring, spatial planning and management, as well as strengthening interinstitutional and cross-border cooperation. **Spahiu** identifies the preparation of a Biosphere Reserve Management Plan as one of the key next steps, providing a framework for coordinating conservation, monitoring and sustainable development measures.

A shared ecosystem requires shared responses

Despite international recognition, Skadar/Shkodra Lake continues to face numerous challenges. These include pollution from wastewater, industry and agriculture, solid waste, illegal and unsustainable construction, exploitation of natural resources, unsustainable fishing, invasive species and the impacts of climate change.

The National Parks of Montenegro additionally highlight the need to preserve water quality, address poaching and illegal fishing, prevent degradation of natural habitats, illegal use of space and carefully manage growing interest in tourism development. For EnvPro, the answer lies precisely in an approach that treats Skadar/Shkodra Lake as a single ecological whole. *"The ecosystem does not recognise administrative borders. The water regime, species migration, fishing and other environmental pressures have a shared impact on both sides, meaning that fragmented management inevitably weakens the sustainability of the whole,"* **Katnić** emphasises.

The establishment of two connected national biosphere reserves, the Skadar/Shkodra Lake Watershed in Montenegro and Shkodra in Albania, provides the basis for the next phase of cooperation. According to

EnvPro, the next steps should include formalising a joint transboundary biosphere reserve and coordination body, preparing a management plan, further harmonising approaches to resource use and monitoring protocols, as well as jointly attracting funding and developing new projects. EDEN Center conveys a similar message. **Prifti** stresses that UNESCO recognition should not be viewed as the end of the process, but rather as the beginning of a new phase. *"The priority should be to establish a sustainable management mechanism involving institutions, communities and local stakeholders from both countries. The shared vision built during the project must continue through concrete activities, community involvement, nature conservation and the promotion of sustainable tourism," Prifti emphasises.*

From a European project to international recognition

The result achieved also demonstrates the broader importance of the IPA Cross-Border Cooperation Programme. European Union support enabled partners from Montenegro and Albania to bring together institutions, experts and local communities, conduct research and workshops, improve monitoring and prepare the technical documentation required for the UNESCO nomination.

"EU support through the IPA Cross-Border Cooperation Programme Montenegro-Albania was crucial. This result would not have been possible on this scale and within this timeframe without it," Katnić emphasises. EDEN Center also particularly highlights the importance of European support. According to **Ersa Prifti**, funding through the IPA Programme enabled institutions, organisations and communities from the two countries to come together around a shared vision for the protection of Skadar/Shkodra Lake and the sustainable development of the wider area. *"European Union support enabled the strengthening of cross-border cooperation and the preparation of a joint process that culminated in UNESCO recognition," says Prifti.*

The National Parks of Montenegro also assess that the value of European support does not end with the completion of the project. In addition to

UNESCO status, the equipment, professional knowledge, joint methodologies and experience of cooperation will remain important for the future management of Skadar/Shkodra Lake. They therefore view European Union support not merely as financing for a single project, but as an investment in long-term capacities and in the shared responsibility of Montenegro and Albania towards one of the most important ecosystems in this part of Europe. NAPA shares a similar assessment. **Juxhina Spahiu** emphasises that the importance of European Union support went far beyond financing project activities. It enabled the strengthening of institutional capacities, the exchange of expertise and good practices, improvements in biodiversity monitoring, and the development of structured cross-border cooperation between institutions and other stakeholders from the two countries.

"This result concretely demonstrates the value of European Union support for cross-border cooperation and the potential of this instrument to contribute to sustainable results in the field of nature and biodiversity conservation," Spahiu emphasises.

For NAPA, UNESCO recognition therefore does not mark the end of the process. The Agency has applied as a partner for continued support under the Cross-Border Cooperation Programme Montenegro - Albania 2021–2027, with the intention of continuing and further developing the work initiated through the previous project. NAPA sees the preparation of a Biosphere Reserve Management Plan as one of the main objectives of the next phase, defining priorities and concrete measures for biodiversity conservation, monitoring, sustainable development and the involvement of local stakeholders. *"UNESCO recognition should not be viewed as the final point of the process, but as the beginning of a new phase of effective and sustainable management of the biosphere reserve," Spahiu concludes.*

The inclusion of the Skadar/Shkodra Lake Watershed in UNESCO's World Network of Biosphere Reserves therefore represents both the completion of an important process and the beginning of a more demanding phase. International recognition must now be translated into long-term cooperation, better management of natural resources and tangible benefits for the communities living around the lake. For the IPA Cross-Border Cooperation Programme Montenegro - Albania, this result represents a strong example of what cross-border cooperation should deliver: partnerships that outlast individual projects and results whose significance extends beyond national borders.

The Programme structures will continue to support initiatives that strengthen cross-border cooperation, bring communities on both sides of the border closer together and contribute to environmental protection, sustainable development and the long-term preservation of the shared natural heritage of Montenegro and Albania.

News on projects financed under the 4th CfPs IPA CBC Programme Montenegro - Albania

Accessible Boat Tourism brings partners together at Vau i Dejës Lake

Representatives of institutions, project partners and stakeholders from Montenegro and Albania gathered on 16 June 2026 in Vau i Dejës for the event *"Networking and Cooperation for Professional Development and Accessible Tourism"*, organised within the *Accessible Boat Tourism* project.

The event provided an opportunity to exchange experiences, strengthen cross-border partnerships and discuss ways to further promote accessible and inclusive tourism. Opening remarks were delivered by representatives of the National Chamber of Crafts of Albania, the Montenegrin Employers Federation, SASPAC, the Ministry of European Affairs of Montenegro and the Joint Technical Secretariat.

Participants were also presented with the progress achieved in project implementation, followed by a panel discussion focusing on the needs and challenges faced by stakeholder groups, professional development and cooperation in the field of accessible tourism. Stakeholders shared their experiences and reflected on the impact of project activities on their professional development.

The programme also included a certification ceremony, during which craftsmen were awarded the title of "Master", further highlighting the project's contribution to professional development and recognition of skills. During the practical field demonstration, participants were introduced to the progress made in adapting the boats to improve accessibility for persons with disabilities (PwDs), as well as to the installation of ramps along the lakeshore. Once completed, these interventions are expected to improve accessibility and create greater opportunities for the development of accessible water tourism for persons with disabilities.

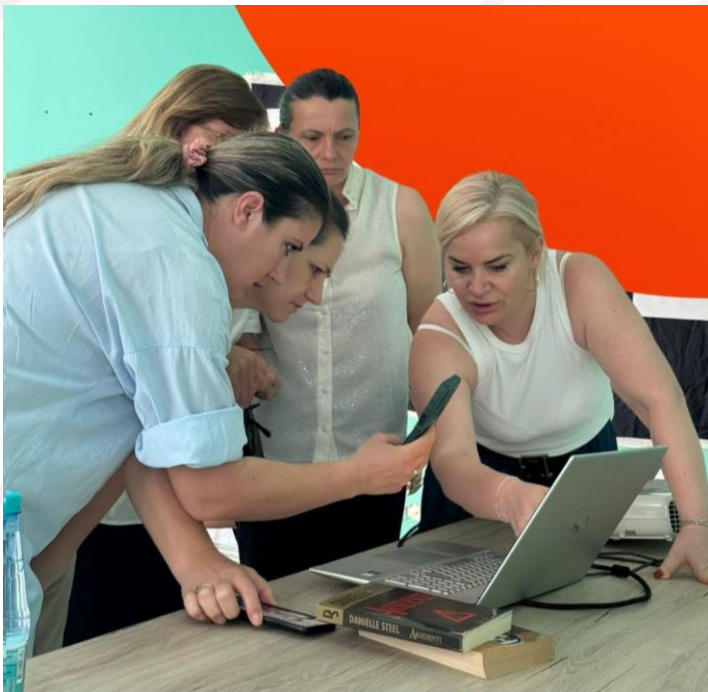

By combining professional exchange, networking and practical demonstration, the event contributed to stronger cooperation between stakeholders from Montenegro and Albania and promoted a more inclusive approach to tourism development in the cross-border area.

The activity was organised within the *Accessible Boat Tourism* project, implemented by the Montenegrin Employers Federation in cooperation with the National Chamber of Crafts of Albania.

Women artisans in Lezha and Mirdita strengthen skills for employment and entrepreneurship

Women artisans in Lezha and Mirdita are strengthening their professional, creative and entrepreneurial skills through a series of training sessions, practical exercises and learning activities aimed at improving their employment and self-employment opportunities.

The activities combine traditional craftsmanship and cultural heritage with contemporary skills and market-oriented approaches. Through theoretical and practical sessions, participants have explored the different stages of artisan product development, from identifying sources of inspiration and analysing market trends to understanding consumer needs and transforming initial ideas into viable product concepts.

Particular attention has been devoted to product design, the use of colours and the strategic selection of materials, helping participants improve the quality, functionality and attractiveness of their products. The women have also strengthened their technical skills in traditional embroidery and

learned more about standardisation of production processes, quality control and technical documentation.

Alongside technical knowledge, the training has encouraged participants to think about their crafts from an entrepreneurial perspective. By analysing market demand and developing product ideas and design concepts, the artisans are gaining practical tools to create

more innovative, sustainable and market-oriented products and to explore opportunities for generating income through their skills.

The activities have also provided a valuable space for cooperation and exchange of experience among women artisans from Lezha and Mirdita. In this way, the initiative contributes not only to improving individual professional capacities, but also to the economic and social empowerment of women and the promotion of traditional crafts as a sector with potential for local economic development and preservation of cultural identity.

The training activities were delivered by Qendra Balance within the project *Promoting Decent Employment for Youth and Unemployed People in the Cross-border Area of Montenegro and Albania*.

The project is implemented by World Vision Albania, the Employment Agency of Montenegro and the National Agency for Employment and Skills of Albania, aiming to create better employment and self-employment opportunities and strengthen skills relevant to the labour market in the cross-border area.

Women Hub opens in Ulcinj to support women entrepreneurs

A new Women Hub has been established within the premises of the Municipality of Ulcinj, providing a dedicated space for training, education, networking and professional support for women entrepreneurs and women business owners.

The newly equipped Hub is designed to serve as a modern and accessible space where women can develop their entrepreneurial skills, exchange ideas and receive practical support for starting or further developing their businesses.

To support a range of training and educational activities, the Women Hub has been equipped with eight laptops, an A3 multifunction printer and scanner, an interactive digital display for presentations and podcast recording equipment. The

Hub also includes a multifunctional training and meeting area with movable tables and seating capacity for up to 40 participants, allowing the space to accommodate workshops, presentations, networking events and other activities.

Beyond providing a physical space and equipment, the initiative will offer women access to specialised professional support. The project is preparing the engagement of experts in economics, law, psychology and digital marketing, whose advisory services will be available free of charge to interested women entrepreneurs. This support is expected to help women address some of the practical challenges associated with establishing, managing and developing a business.

The Women Hub therefore represents more than a newly equipped facility. It creates a local support point where women can acquire new knowledge, establish professional connections, exchange experiences and develop business ideas in a supportive environment. Through these

services, the initiative seeks to contribute to women's economic empowerment and encourage the development of women-led microenterprises in the cross-border area.

The equipment for the Women Hub was co-financed by the European Union through the project *Women microenterprise development in the cross-border area*.

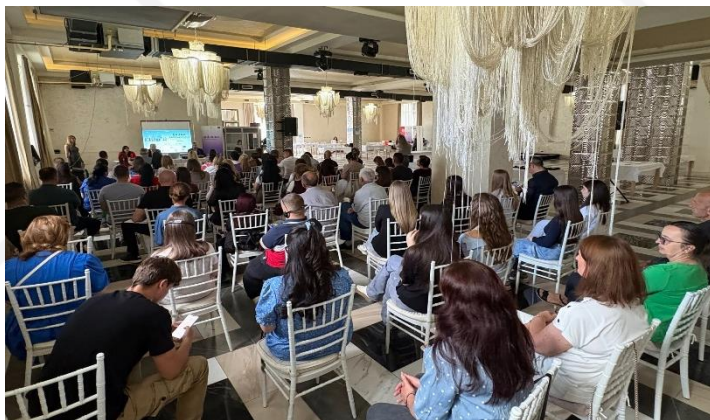

The project is implemented by the Municipality of Ulcinj, in partnership with Monitoring Group Ulcinj – MogUL and Code Partners from Shkodra.

POWER project promotes employment and self-employment opportunities for persons with disabilities

The POWER project continued its efforts to improve employment and self-employment opportunities for persons with disabilities through a combination of networking, information, direct engagement with employers and targeted support for entrepreneurship. On 11 June 2026, Caritas of the Archdiocese of Bar organised an employment fair for persons with disabilities in Berane, bringing together persons with disabilities, employers, representatives of public institutions and civil society organisations from Montenegro and Albania.

Through introductory presentations, a panel discussion and networking activities, participants explored employment and self-employment opportunities, available support measures and examples of good practice in inclusive employment. The event also presented opportunities for starting a business through the support mechanisms envisaged under the POWER project.

An important part of the Employment Fair was the opportunity for direct interaction between persons with disabilities and potential employers, institutions and organisations providing employment-related support. This enabled participants to establish new contacts, obtain practical information and explore possibilities for employment, self-employment and future cooperation. Check out the video from the event [here](#).

Building on these activities, in August 2026 Caritas launched a public call for self-employment support for persons with disabilities within the POWER project. The call provided an opportunity for interested applicants to seek support for starting their own businesses, translating the project's capacity-building and employment-support activities into concrete opportunities for entrepreneurship.

Applicants were provided with the necessary application documentation as well as guidelines for preparing a business plan, helping them structure and develop their business ideas. The call was open until **28 August 2026**.

Together, the Employment Fair and the self-employment support scheme demonstrate the project's integrated approach to labour market inclusion. By combining information and networking with practical opportunities for business development, POWER supports persons with disabilities in strengthening their position in the labour market and pursuing more sustainable employment and self-employment pathways. The project *People with disabilities: new Opportunities for Work, Employability, professional Rehabilitation - P.O.W.E.R.* implemented by Caritas of Bar's Archdiocese, Caritas Albania and Down Syndrome Albania continues to support the development of competencies that contribute to increased independence, social inclusion and employment opportunities for persons with disabilities.

Joint Monitoring Committee and Bilateral Meeting held in Bar

The 3rd Joint Monitoring Committee (JMC) meeting of the IPA III Cross-Border Cooperation Programme Montenegro - Kosovo 2021-2027 was held on 9 July 2026 in Bar (Montenegro). Representatives of the participating countries gathered to review the progress of the Programme and discuss key implementation matters.

During the meeting, the Joint Monitoring Committee examined the projects proposed for funding under the 1st Call for Proposals and provided its advisory opinion on the list of operations selected prior to the grant award decision. Members also exchanged views on the overall implementation of the Programme and the next steps to ensure its successful delivery.

Following the JMC meeting, representatives of the operating structures held bilateral consultations to discuss the upcoming programme activities and the roadmap for the last quarter of 2026. The meeting also served as an opportunity to address open implementation issues, strengthen coordination between the programme partners and agree on the next steps for the effective implementation of the Programme.

The meetings reaffirmed the strong partnership between Montenegro and Kosovo and their shared commitment to achieving the objectives of the IPA III Cross-Border Cooperation Programme through close cooperation, effective coordination and transparent programme management.
